

The growing mobile menace.

New research from Sapio and Menlo Security lays bare the scale of the smartphone cyber threat to enterprises.

Mobile threats to the enterprise are on the rise – and in the UK, 50 per cent of IT decision makers aren't ready. 🇬🇧

50% of UK respondents (53% globally) said it's **not possible to be prepared** for all the tactics and strategies used by attackers targeting mobile devices

76% in the UK and globally believe **end users are more open to attacks** on mobile devices than a year ago

Phishing is still the **most common** mobile security attack - experienced by **72%** of UK respondents (71% globally)

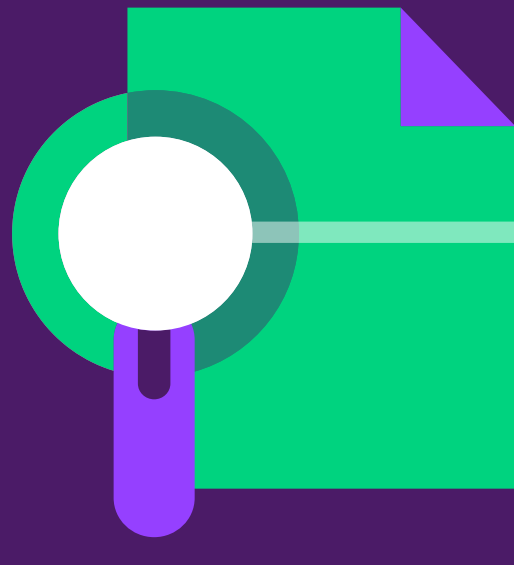

Split decision:

63% of IT decision makers in the UK (55% globally) believe organisations **should be responsible** for securing mobile devices used for work

What do the other **37%** in the UK think?

Key findings:

12

mobile security threats detected on average in the last month by UK respondents (14 globally)

Only **25%**

think their employees report mobile browser vulnerabilities every time they occur

92%

in the UK said attacks on mobiles are becoming more frequent and sophisticated - the highest figure globally

93%

globally said mobile security was a high priority in 2021. **59%** said it was very high

The hand-held insider threat.

53%

of UK employees say they **update their mobile device or operating system** as soon as a new patch is issued - lower than the global figure of **59%**

82%

of IT decision makers globally have found **malicious document downloads** on corporate-owned mobiles in the past 12 months

72%

Most UK employees think **iOS** (72% compared to 62% globally) and the **Apple App Store** (68% vs. 58% globally) are **more secure** than Android & Google Play

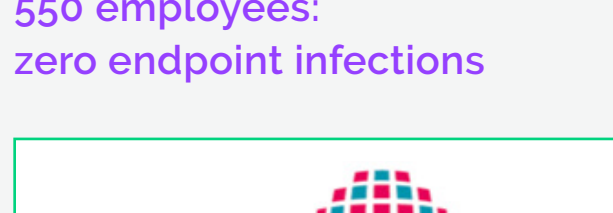

A 100% safe space for mobile working.

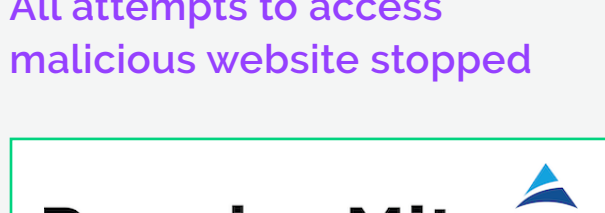

Menlo's secure web gateway (SWG) with web isolation technology completely separates mobile devices and users from internet-borne threats.

550 employees: zero endpoint infections

It can be deployed quickly at infinite scale to completely eliminate the threat of malware from mobile websites, emails and infected documents.

All attempts to access malicious website stopped
