

Skyware Hospitality Solutions has completed a direct XML interface with SiteMinder, a global provider of hotel internet reservation solutions. The interface will improve and expand the distribution process to the Online Travel Agents for hoteliers.

FOR IMMEDIATE RELEASE

Redbourn, Herts –1 September 2011 – Skyware Hospitality Solutions, a global provider of web based property management systems has expanded its services to allow users the capability to update both rates and availability securely and instantaneously through SiteMinder applications to all of the main Online Travel Agents. The XML connection improves the speed and accuracy at which rates are updated and reflected on the booking system. "Accurate and effective rate updates are important to our clients," remarked Mario Gordon, Skyware's Chief Technology Officer. "The direct connection with Siteminder will enable our hotel clients to save time and be confident that all of their rates and room availability are distributed correctly to their booking channels," Mr. Gordon said.

In addition, new reservations made through the Online Travel Agents, are delivered back to the hotel by SiteMinder, and written directly into Skyware. This removes the need for hotels to re-key new reservations into the hotel system, and thus cuts down the risk of errors or omissions.

The increase in demand for a streamlined distribution process is behind the popularity of PMS integrations and subsequently pmsXchange, according to SiteMinder's General Manager for Sales and Marketing, David Williams.

About Siteminder

SiteMinder assist properties in gaining more online bookings and managing their online room distribution by implementing the best property management solutions and distribution channel management principles. For a low flat monthly fee, live rates and availability are sent from the PMS/CRS to the world's leading booking sites via pmsXchange, and reservations from these sites are injected by pmsXchange directly into the PMS/CRS system. As soon as a booking is made, inventory across all of the sites is adjusted accordingly and the reservation is instantly delivered for no charge, which means there is no longer a need for manually re-keying online reservations by hotel staff.
