

Save up to 30% of your energy costs WITHOUT INVESTMENT

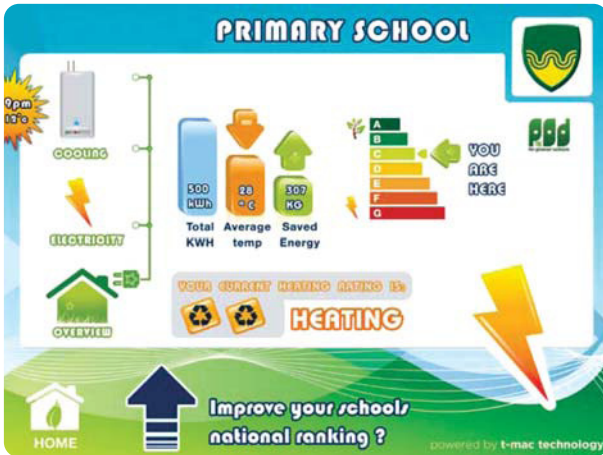

For every organisation, energy use is a large unavoidable cost. Technologies to reduce energy consumption by up to 30% are available now and such potential savings are hard to ignore. However, decisions to install energy saving solutions are being delayed, or shelved, because of the need to restrict capital expenditure. In the meantime, energy waste continues and potential cost savings lost.

UK businesses, on average, waste nearly a third of the energy they buy. (CBI report 2007)

How can NESS help you?

NESS acts as a catalyst for the implementation of energy saving solutions. It takes capital expenditure out of the equation. NESS works closely with consultancies and suppliers by simply providing their customers with the use of the energy saving technologies required. And in return, NESS receives a small share of the cost savings as payment. This payment also includes all support and maintenance required to ensure on-going customer satisfaction.

How long will it last?

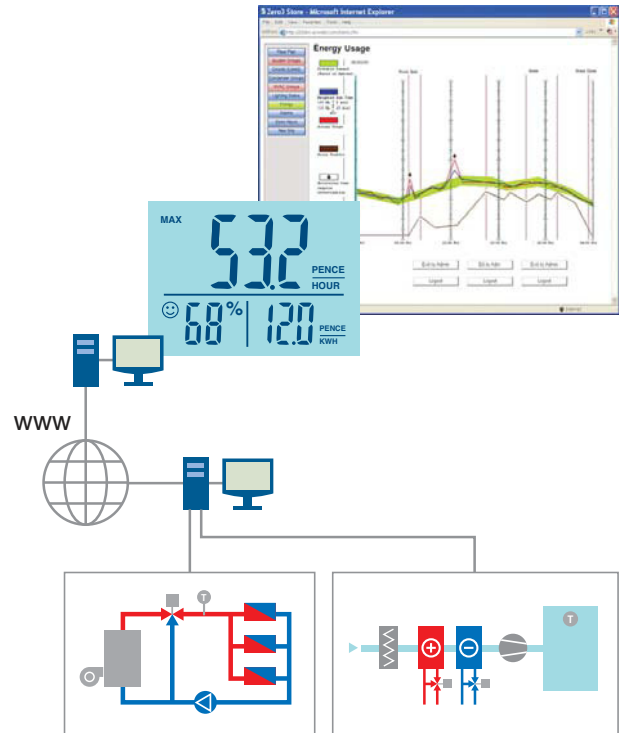

As new technologies become available, customers with NESS share agreements have the flexibility to exchange, add or upgrade their installed energy saving equipment. As there would be no existing capital acquired equipment to be written off, increased energy cost savings can be made immediately.

What can you upgrade?

Energy saving technologies and services covered under a NESS share agreement may include boiler upgrades, lighting, heating, hot water, electric power compensation technologies, metering and monitoring and steam processing. Advanced technologies, such as fuel cells, solar and wind power, heat engines and CHP, may also be included within a NESS partnership.

How are your costs monitored?

Monitoring, reporting and auditing of user energy consumption and savings are key parts of the NESS service. In all cases, NESS includes annual audits of energy consumption to ensure that estimated savings have been achieved. On-line web based reporting and auditing shows user energy consumption in detail plus energy and carbon savings achieved.

For organisations with an energy saving solution gathering dust - contact us to see how you can start making your cost savings without delay.

For user organisations who would like to take advantage of the immediate cost savings offered by NESS - contact us and we'll put you in touch with a range of NESS partner solution providers.

For suppliers who are not as yet NESS partners - contact us to learn about all the benefits of working with NESS.
